

Modeling Template

Diagram and Relationships

In this space, produce an annotated diagram of all important **components** and **relationships**.

Evidence

Describe the observations that this model explains. What did the scientists **do**? What did they **find**? What does that **mean**?

Predictions

Based on this model, what predictions can be made about novel situations? You may propose a change in the **system** or a change in the **evidence**, then describe how that change would change the model.
